Subject: RE: ACM model [2020-02-07]

Summary Discussion on ACM.
Agenda outlined in [ACM.pptx](#)

1. DevOps – mapping DevOps technologies to the appropriate standards (joint effort with Jeff Greco).
There are 37 pieces of software that should be part of ESDC's Technical Standards. How to process them?
CM: Ideally, these should be done as 'bulk', provided that considerations such as:
 - How long have they been in use?
 - Is anything mission-critical?
 - Are there (inter-)dependencies?They may be able to be handled secretarially. Consider the process in "[Technology Standards Governance proposal Jan2020.pptx](#)"

[Slide 4] Going through SMS for intake, they will undergo assessment by Technology Architecture / IT Security / IT Accessibility.

[Slide 5] The intake process diagram is shown here, along with what steps may be involved, depending on the nature of the technology.

Action [Claude]: Contact Marc-André to know better how to proceed with the 37 set of technologies to be brought into the Brick repository.

2. DevOps – mapping DevOps technologies to capabilities as per DACM (joint effort with Jeff Greco).
Essentially: Should SAS continue to create ACM capabilities to deliver EARB decks and artifacts in QualiWare, or should we wait for QualiWare X version, and the migration of Brick management to QualiWare (possibly February 24th?)?

Action [Claudette, Ken]: Decide on what path SAS should take, accounting for likely remapping in QualiWare, or possible delays in getting access to the complete Brick listing.

Detailed notes below,

NT: Agenda 1) Mapping Technologies. Jeff Greco, update standards for DevOps. Jeff only sent 'Bricks'. Could not find Bricks for technologies.

CM: Not all defined.

NT: What should I do next to have standards.

CM: Do you have the complete list...? Different approach...

NT: I can prepare what's needed, I don't know how. Here, 37 logiciels.

CM: SW Intake process with SMS group.

NT: I know it exists...

CM: TS Standards Proposal. For Clients, process. Slide 5, Process can take 1 week.

[ATST/Strategy%20and%20Asset%20Managment%20Services/Projects/Technology%20Standards%20Governance/Technology%20Standards%20Governance%20proposal_Jan2020.pptx](http://dialogue/grp/TAWS-ATST/Strategy%20and%20Asset%20Managment%20Services/Projects/Technology%20Standards%20Governance/Technology%20Standards%20Governance%20proposal_Jan2020.pptx)

NT: My opinion?

CM: Marc-Andre could provide his opinion. Now: Fast Lane, when criticisms are raised. Categorize (Emerging, etc.), EARB: Required / no. Fast lane, approve produces. Mostly: TSWG, group looks at proposed software. How long have they existed? Secretarial approval...

NT: I need to ask Jeff, who uses this. We're trying to be ahead of this, avoid a rush. SADD... Won't have time at the end. Questions for Jeff. Otherwise, may need to go through SMS' process (Marc-André).

CM: It is onerous. For all, but I'm hesitating to say you need to go through that process...

NT: 37. 10 already there.

CM: OK. Once id'd, we can decide, surely.

NT: Fill out the form (SMS)...

CM: SMS will send the form to Security / Accessibility / ???, categories. For now: Scope of the list, people involved.SLIDE 4.

NT: Excel workbook.

CM: Before filling out 37 forms...

NT: Preliminary work, through CPS...Tell her what was discussed here. We can do the work, if needed. Important to understand how it works.

CM: Exactly. That's the intake process. Wasn't done for these, not sure why. We might do them as a set... Bulk agreement for all. You put them as Emerging...

NT: For those I couldn't find in the Bricks. Assuming should be Emerging...

CM: Yes. Dependencies? Mission critical?

NT: Q's for Jeff...

CM: Suggest: Bulk of those not standardized.

NT: SMS is a sub-group / division of TSWG?

CM: Yes, key to the process.

NT: I understood TSWG, not all in Technology.

CM: Vendor Mgt, categorizing, how to implement the software.

NT: SMS does the work? Work horse?

CM: That's it. To TSWG, decide SMS, present to ARC (approve). Decide for EARB—bigger scope. If goes back to client, put into the standard. OCMC aren't key, ARC takes their place.

Depends on the software; API would not undergo assessment. Java / Python, discussed HL at TSWG, framed into appropriate standard.

Kafka: From emerging software. Notes at bottom. Go to site, add it, can search all the...

To be done thru SharePoint...

JL: Learn how to do 1 or Bulk.

NT: More unclear one...

CM: Keith Murphy takes care of this one.

NT: TB Operating System

Linkages to ensure software is approved. To be able to deliver our work. TA & CM are doing s/t like this, maybe we can use their work? If published to QW on Feb 24, will we have access?

CM I'll discuss with Keith (likely working on this with J-R...?), interesting.

NT: New project / deck to kickoff, normally client knows departmental cap'y trying to address. If we had the standard map to the ACM, click to show the capability, what software to use, which were approved by EARB, Cheat Sheet...

CM: Bricks published in QW.

JL:

CM: Replaced Jacques this summer, not filled in on the entire portfolio. QW were happening, but on East side of shop, vs West. Now, on top of everything.

NT: Appreciate your time. M-A, could be a while until things get done.

CM: I need to get my information.
